

Dallas Freightliner

opens a Texas sized parts distribution and sales service center.

Less than two years ago Dallas Freightliner opened the most modern and largest commercial truck facility in North America. The location houses more than \$3,000,000 in parts inventory and employs approximately 200 people. Everything from bolts to bumpers are stored in the building.

ATC Freightliner Group turned to Borroughs experts to design a buildable mix of efficient storage for its parts department.

The multi-level parts department was strategically designed to improve efficiencies in product picking, maximize available space and be flexible for future needs.

High Density drawers are placed along several walls, closest to the counter, for small parts and hardware. Strong Box Edge Plus® clip-type shelves (providing flexibility and durability) are installed for quick access to medium-sized parts.

Closed end panels on the Box Edge units provide a clean finish.

The second floor of the parts department, which holds over a dozen rows of Rivet-Span®, creates a pass-through feature for long parts storage. The easily adjustable shelves adapt when inventory changes.

Paul Ground, Warehouse Supervisor at ATC Freightliner was pleased with the entire project.

“Man, when I found out we could spec Borroughs I was ecstatic. And Ricky was just great.”*

Everything from the initial concepts, drawings, customer service and installation went smoothly. The project was completed on time and is running fast and efficient.

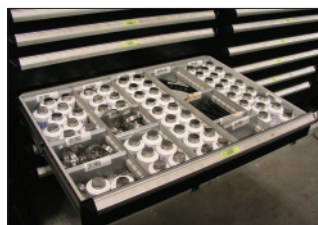

*Ricky Johnson, Borroughs Automotive and Industrial Product Manager

DALLAS FREIGHTLINER

Manufacturer:	Borroughs Corporation	www.borroughs.com
Owner:	Dallas Freightliner • Western Star	www.atcfreightliner.com
Location:	Dallas, TX	

- Strong Box Edge Plus® clip-type shelves provide flexibility and durability
- Efficient parts storage for quick product picking
- Delivery synchronized with installation requirements

HD Drawers for compact, efficient small parts storage

Box Edge Plus® storage for medium sized parts

Runs of Rivet-Span® fill the second floor
