

Hamilton Sorter *Custom Capabilities*

Ridge High School Photography and Ceramics Studios

This casework configuration is designed to meet specific size and functional requirements in the Photography Studio, including: Tall, ventilated cabinets with space for film strip drying, lockable storage compartments for securing camera equipment and lockable drawers for supplies.

The top of this wall of lockable storage cabinets in the Ceramics Studio displays student work, protected from unintentional damage.

A proposed redesign of Ridge High School's Photography and Ceramics Studios presented a series of functional, storage and workflow challenges that needed to be addressed. Christine High, Supervisor of Fine and Practical Arts, outlined some of the issues:

- Students require storage space that will accommodate a variety of different projects, from oversized photographic prints to ceramic sculptures
- Specific functions like film drying need to be integrated into an overall casework configuration
- Sinks need to be simultaneously accessible by groups of students
- Secure storage is necessary for expensive camera equipment

Working with Ms. High on the project, Dorothy Brittain of Garden State Office Systems turned to Hamilton Sorter's Custom Capabilities support team for help in creating a Caseworks solution that met her client's unique needs. Because Hamilton's modular components are easily modified to meet specific size and functional requirements, a cost-effective solution quickly emerged that met the school's budget and design objectives.

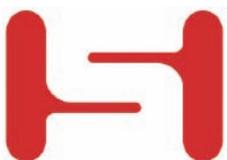

Hamilton's system of adjustable shelves are repositionable in 1" vertical increments and feature easy to read full width labels.

This oversized sink is built into a peninsula island for multiple access by students.

In the Photography Studio, Hamilton's unique organizing shelf system provides individually adjustable compartments for photographic projects, and tall cabinets with ventilation grills facilitate air flow for film drying. In the Ceramics Studio, wall mounted open shelving allows sculpture projects to air dry, while oversized sinks are built into peninsula islands with accessibility from three sides. Overall, the configurations of drawers and cabinets meet the facility's specific storage needs and, Ms. High claims "create greater flow and facilitate management...I really love it!"

Hamilton's Custom Capabilities program is designed to provide value engineered, custom solutions that meet the specific space, functional and budget objectives of a project.
