

Hamilton Sorter *Custom Capabilities*

Comprehensive Breast Care Institute, Bucks County Pennsylvania

The dramatically curved Reception Desk reflects the Institute's quality of care in the richness of book matched cherry veneer and solid surfacing transaction counters. Hamilton used modular construction for cost-effectiveness and easy on-site assembly.

Exam Room wall cabinetry features angled tops, to ensure visibility and access to cleaning staff.

Mike Todd, Hamilton Sorter's local representative was challenged by Nashville Office Interiors, a Haworth dealer, to develop a millwork proposal for their Comprehensive Breast Care Institute project in Bucks County, Pennsylvania. Compatibility with the project's specified modular wall system was critical, but equally important was the ability to meet the detailed design and specification requirements of project developer Diversified Specialty Institute of Nashville, and their architect Jorge Soudu.

Hamilton Sorter's millwork solutions interface with any modular wall system and Mike was able to demonstrate Hamilton's custom capabilities and precision casework construction with walk-throughs of a number of completed projects in Atlanta, Georgia. After those appraisals, he was told that "if Hamilton can meet the budget, the project was his".

Hamilton carefully reviewed and calibrated the requirements which encompassed a wide range of materials and components, including book matched sequenced cherry veneer and solid surfacing for the reception desk, eye wash stations and nurses stations with sinks and splash guards. Hamilton's proposal came in well under budget!

Cherry veneer and solid surfacing counters reflect the Institute's design themes, while the registration areas provide patient privacy.

(right) The Nurses Station features a wide range of cabinetry options to meet the facility's specific storage and functional requirements, including an emergency eye wash station.

Clear splash guards are set into the solid surfacing counter and enclose the stainless steel sink.

Rick Peppers of Nashville Office Interiors pointed out some of the capabilities that made Hamilton a valuable resource for this client: "They're less expensive than conventional millwork and they are able to perform on large installations around the country."

With the project underway, Hamilton was also able to create standard casework components for design consistency and cost control on future projects for DSI. Hamilton's Custom Capabilities provide the quality advantages of computer controlled manufacturing with the flexibility to execute design and material requirements for the most complex projects.
