

## *University of Iowa Police Department Case Study*

### **A LOCKER ROOM THAT DOESNT SMELL LIKE A LOCKER ROOM**

In 2010, the University of Iowa Police Department was in the market for a new, more spacious locker room as part of their growing facility. "The condition of our old locker room was bad," said Captain Loren Noska. "We were forced to squeeze 30 officers and 215 security guards into a 15' x 15' square room. The lockers were so small it was near impossible to close the locker door without bending the hanger holding your uniform."

#### **SOLUTION: AIRFLOW WARDROBE LOCKERS**

The officers were in need of lockers that would allow them to store their gear properly as well as provide air movement to keep the contents dry and eliminate odor. They found the ideal solution in the Sentinel line of [Airflow Wardrobe Lockers](#).

Captain Noska knew the importance of finding high-quality storage solutions for the officers and guards and designed the locker rooms around the Sentinel Wardrobe Lockers.

"The storage drawer, power outlet, and shelves all tied into the building ventilation system, meaning our locker room doesn't smell like a locker room," Captain Noska said.

The new and improved locker room gives University of Iowa Police a recruiting edge over the competition. Officers touring the new locker room have commented greatly on the advantages provided by the Sentinel Wardrobe Lockers.
